

HACK2SKILL × REDROB AI SUBMISSION

KisanSetu AI

A Multilingual, Voice-Activated AI Copilot Empowering 140M+ Indian Farmers with Real-Time
Agriculture Intelligence & Crop Care.

The Problem & The Opportunity

Bridging the vast digital, linguistic, and operational divide in India's agricultural ecosystem through voice first AI technology.

Unaddressed Barriers in Farming

The Language & Tech Barrier

Over 70% of Indian farmers cannot access complex written English or Hindi agricultural websites. Information must be localized, auditory, and conversational to build trust and high utility.

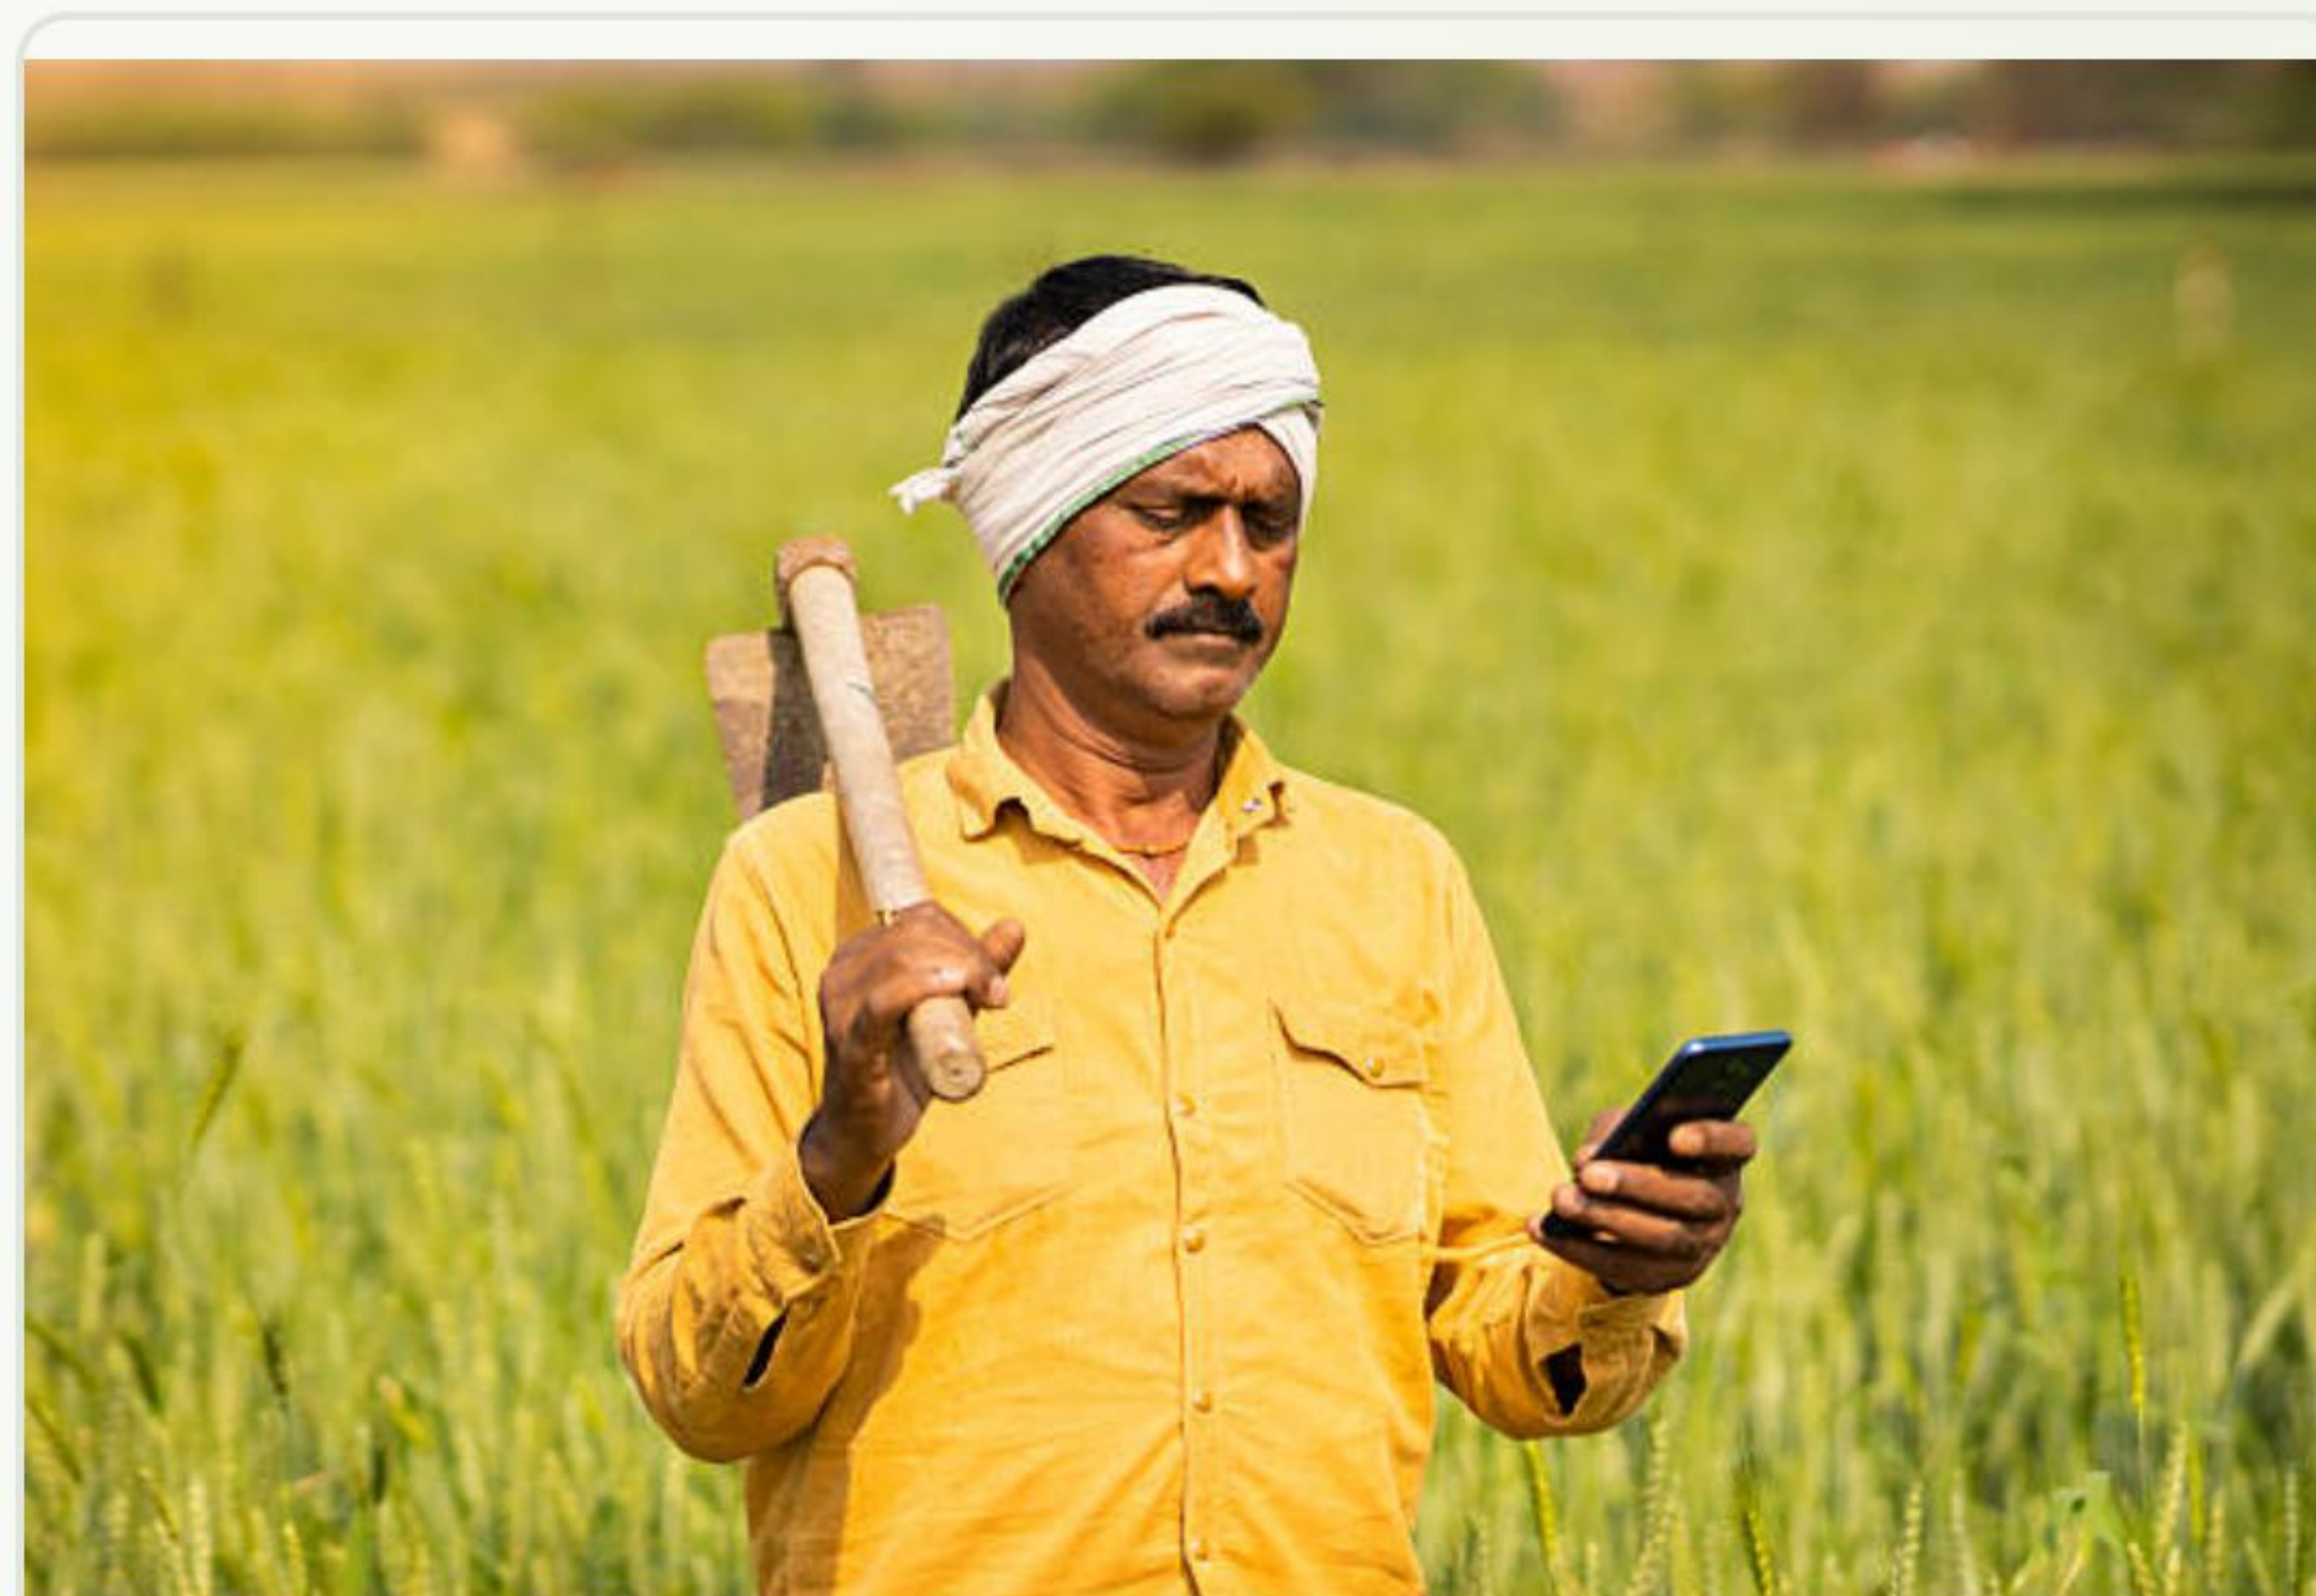

Delayed Crop & Price Diagnostics

Delayed detection of crop diseases leads to an average loss of 15-25% of yield. Lack of access to real-time market/mandi prices keeps margins captured by middle-men.

KisanSetu AI Core Capabilities

SMART FEATURES BUILT FOR INDIA

- ✓ **Multilingual Voice AI:** Talk naturally in any regional bhasha (Bhojpuri, Kannada, etc.). Receive audio guidance instantly.
- ✓ **AI Vision Diagnostics:** Simply snap and upload a photo of the infected crop. Get accurate treatment options instantly.
- ✓ **Mandi Trend Predictor:** Understand real-time regional marketplace price swings to sell crops at the optimal price point.

The Three Pillars of Impact

Mass Scale

Integrates directly into WhatsApp and basic smartphones. Zero learning curve for non-tech-savvy users.

Crop Security

Pre-empts disease spreads via community-crowdsourced image warnings, shielding regional farms.

Wealth Boost

Direct insight into pesticide application optimization and competitive mandi pricing raises margins by 30%.

Let's Build Next India.

Empowering the backbone of our economy with custom Voice-First AI.
